

Gordon Burgin's Puzzles

September 2026 challenge

An 8's Puzzle

Using eight eights and using addition only, can you make a sum equal to 1000?

The Four Studios Puzzle

Four friends, **Alex**, **Beth**, **Carl**, and **Dana**, each rent a different art studio in a row of four units: Studios 1, 2, 3, and 4 (from left to right). Each person works in a different medium (**Oil**, **Watercolour**, **Sculpture**, and **Digital**) and prefers a different music genre (**Classical**, **Jazz**, **Rock**, and **Ambient**) while working. Determine which of the friends are in which studio, and what their medium and music preferences are using the following eight clues.

1. **Beth's** studio is not at either end of the row.
2. The **Sculpture** studio is immediately to the right of the **Digital** studio.
3. The person who listens to **Rock** works two studios away from **Alex's** (i.e., there is exactly one studio between them).
4. Studio 3 is used for **Watercolour** and does not play **Jazz**.
5. **Carl** works in a studio next to and left of **Dana's** studio, but neither of them is in Studio 1.
6. The **Classical** music studio is to the right of the **Jazz** studio
7. The **Oil** painter listens to **Ambient** music.
8. **Dana** does not work in **Digital**.
